Hints:

CMR1 - Canine Multifocal Retinopathy – is an autosomal recessive eye disorder. This disease is caused by C73T mutation in exon 2 of VMD2 gene.

The mutation causes forming of premature stop codon in position 25 (R25X).

CMR1 N/N – homozygous individual non-affected are genetically clear.

CMR1 N/A – heterozygous carrier are clinically without any symptoms. They are genetically considered carriers of the disease, disease is transmitted to offspring..

CMR1 A/A – homozygous affected individual

Notice: This protocol applies exclusively to the sample and the data that were supplied by the submitter. DNA analysis concerns only the above-mentioned disease. No information regarding the customer as well as the purpose and results of the analysis will be provided to third parties.
